

This assignment does not count toward the final mark.

Assignment 1 - Code submission

Course code and name: COSC2753 Machine Learning

Length: N/A

Type: Individual

Feedback mode: Written feedback

Late work: For assignments 01 to 05 days late, a penalty of 20% (of the marks awarded) per day will apply. For assignments more than 05 days late, a penalty of 100% will apply. Weekend days (Saturday and Sunday) are counted when counting total late days.

Learning Objectives Assessed

- **CLO1:** Understand the fundamental concepts and algorithms of machine learning and applications
- **CLO3:** Set up a machine learning configuration, including processing data and performing feature engineering, for a range of applications
- **CLO4:** Apply machine learning software and toolkits for diverse applications

Ready for Life and Work

Completing this assessment would help you achieve the following employability skills:

- Analyse and model requirements and constraints for the purpose of designing and implementing solutions to a learning challenge
- Evaluate and compare approaches and algorithms on the basis of the nature of the problem/task being addressed
- Interpret abstract theoretical propositions, choose methodologies, justify conclusions and defend professional decisions to both IT and non-IT personnel via technical reports of a professional standard and technical presentations

Submission Instruction

This is a third assignment page for the **code-submission** of Assignment 1.

Place your:

- Jupyter Notebooks,
- Python code,
- Additional supplementary source files

Into a single ZIP file named:

COSC2753_A1_YourStudentID.zip (for example COSC2753_A1_s12345.zip)

Then upload that zip file to this submission.

- Zip your Jupyter notebook file and other necessary files before submitting it
- Should be a ZIP file containing source code and all the support files. Make sure that *your assignment can run only with the code included in your zip file!*
- Name your zip file as convention above.
- Please make sure that the notebook must be readily opened and executed on any standard machine/setting. We strongly recommend you to attach a README file with instructions on how to set up the environment to run your file (e.g., put data files in which folder, install which libraries/packages etc.) and how to run your application.
- Please note that your code will be checked for plagiarism by our specialised software and not only by Turnitin.
- Please **ONLY submit your code into this page.**
